7.564 src/main/cms/CMSEException.h File Reference

```
#include <string>
#include <vector>
#include <iostream>
#include <exception>
#include <cms/Config.h>
```

Data Structures

- class **cms::CMSEException**

CMS API Exception that is the base for all exceptions thrown from CMS classes.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.565 src/main/cms/CMSPProperties.h File Reference

```
#include <cms/Config.h>
#include <map>
#include <string>
#include <vector>
```

Data Structures

- class **cms::CMSProperties**
Interface for a Java-like properties object.

Namespaces

- namespace **cms**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.566 src/main/cms/CMSSecurityException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::CMSSecurityException**
This exception must be thrown when a provider rejects a user name/password submitted by a client.

Namespaces

- namespace **cms**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.567 src/main/cms/Connection.h File Reference

```
#include <cms/Config.h>
#include <cms/Startable.h>
#include <cms/Stoppable.h>
#include <cms/Closeable.h>
#include <cms/Session.h>
#include <cms/ConnectionMetaData.h>
```

Data Structures

- class **cms::Connection**

The client's connection to its provider.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.568 src/main/cms/ConnectionFactory.h File Reference

```
#include <cms/Config.h>
#include <cms/Connection.h>
#include <cms/CMSException.h>
#include <string>
```

Data Structures

- class **cms::ConnectionFactory**

*Defines the interface for a factory that creates connection objects, the **Connection** (p. 1296) objects returned implement the CMS **Connection** (p. 1296) interface and hide the CMS Provider specific implementation details behind that interface.*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.569 src/main/cms/ConnectionMetaData.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::ConnectionMetaData**

A *ConnectionMetaData* (p. 1425) object provides information describing the *Connection* (p. 1296) object.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.570 src/main/cms/DeliveryMode.h File Reference

```
#include <cms/Config.h>
```

Data Structures

- class **cms::DeliveryMode**

This is an Abstract class whose purpose is to provide a container for the delivery mode enumeration for CMS messages.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.571 src/main/cms/Destination.h File Reference

```
#include <cms/CMSProperties.h>
#include <cms/Config.h>
#include <string>
```

Data Structures

- class **cms::Destination**

A *Destination* (p. 1776) object encapsulates a provider-specific address.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.572 src/main/cms/ExceptionListener.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::ExceptionListener**

*If a CMS provider detects a serious problem, it notifies the client application through an **ExceptionListener** (p. 1893) that is registered with the **Connection** (p. 1296).*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.573 src/main/cms/IllegalStateException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::IllegalStateException**

This exception is thrown when a method is invoked at an illegal or inappropriate time or if the provider is not in an appropriate state for the requested operation.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.574 src/main/decaf/lang/exceptions/IllegalStateException.h File Reference

```
#include <decaf/lang/Exception.h>
```

Data Structures

- class **decaf::lang::exceptions::IllegalStateException**

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.
- namespace **decaf::lang**
- namespace **decaf::lang::exceptions**

7.575 src/main/cms/InvalidClientIdException.h File Reference

```
#include <cms/Config.h>  
#include <cms/CMSException.h>
```

Data Structures

- class **cms::InvalidClientIdException**
This exception must be thrown when a client attempts to set a connection's client ID to a value that is rejected by a provider.

Namespaces

- namespace **cms**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.576 src/main/cms/InvalidDestinationException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::InvalidDestinationException**

This exception must be thrown when a destination either is not understood by a provider or is no longer valid.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.577 src/main/cms/InvalidSelectorException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::InvalidSelectorException**

This exception must be thrown when a CMS client attempts to give a provider a message selector with invalid syntax.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.578 src/main/cms/MapMessage.h File Reference

```
#include <cms/Config.h>
```

```
#include <cms/Message.h>
#include <cms/CMSException.h>
#include <cms/MessageFormatException.h>
#include <cms/MessageNotWriteableException.h>
```

Data Structures

- class **cms::MapMessage**

*A **MapMessage** (p. 2551) object is used to send a set of name-value pairs.*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.579 src/main/cms/MessageConsumer.h File Reference

```
#include <cms/Config.h>
#include <cms/MessageListener.h>
#include <cms/Message.h>
#include <cms/Closeable.h>
```

Data Structures

- class **cms::MessageConsumer**

*A client uses a **MessageConsumer** (p. 2674) to received messages from a destination.*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.580 src/main/cms/MessageEnumeration.h File Reference

```
#include <cms/Config.h>
#include <cms/Message.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::MessageEnumeration**
Defines an object that enumerates a collection of Messages.

Namespaces

- namespace **cms**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.581 src/main/cms/MessageEOFException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::MessageEOFException**
*This exception must be thrown when an unexpected end of stream has been reached when a **StreamMessage** (p. 3760) or **BytesMessage** (p. 1079) is being read.*

Namespaces

- namespace **cms**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.582 src/main/cms/MessageFormatException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::MessageFormatException**

This exception must be thrown when a CMS client attempts to use a data type not supported by a message or attempts to read data in a message as the wrong type.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.583 src/main/cms/MessageListener.h File Reference

```
#include <cms/Config.h>
```

Data Structures

- class **cms::MessageListener**

*A **MessageListener** (p. 2779) object is used to receive asynchronously delivered messages.*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.584 src/main/cms/MessageNotReadableException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::MessageNotReadableException**

This exception must be thrown when a CMS client attempts to read a write-only message.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.585 src/main/cms/MessageNotWriteableException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::MessageNotWriteableException**

This exception must be thrown when a CMS client attempts to write to a read-only message.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.586 src/main/cms/MessageProducer.h File Reference

```
#include <cms/Config.h>
#include <cms/Message.h>
#include <cms/Destination.h>
#include <cms/Closeable.h>
#include <cms/CMSException.h>
#include <cms/InvalidDestinationException.h>
#include <cms/MessageFormatException.h>
#include <cms/UnsupportedOperationException.h>
#include <cms/DeliveryMode.h>
```

Data Structures

- class **cms::MessageProducer**

*A client uses a **MessageProducer** (p. 2809) object to send messages to a **Destination** (p. 1776).*

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.587 src/main/cms/ObjectMessage.h File Reference

```
#include <cms/Config.h>
#include <cms/Message.h>
```

Data Structures

- class **cms::ObjectMessage**

Place holder for interaction with JMS systems that support Java, the C++ client is not responsible for deserializing the contained Object.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.588 src/main/cms/Queue.h File Reference

```
#include <cms/Config.h>
#include <cms/Destination.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::Queue**

An interface encapsulating a provider-specific queue name.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.589 src/main/decaf/util/Queue.h File Reference

```
#include <decaf/util/Config.h>

#include <cms/CMSException.h>
#include <cms/MessageNotWriteableException.h>
```

Data Structures

- class **cms::TextMessage**

Interface for a text message.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.598 src/main/cms/Topic.h File Reference

```
#include <cms/Config.h>
#include <cms/Destination.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::Topic**

An interface encapsulating a provider-specific topic name.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.599 src/main/cms/UnsupportedOperationException.h File Reference

```
#include <cms/Config.h>
#include <cms/CMSException.h>
```

Data Structures

- class **cms::UnsupportedOperationException**

This exception must be thrown when a CMS client attempts use a CMS method that is not implemented or not supported by the CMS Provider in use.

Namespaces

- namespace **cms**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

7.600 src/main/decaf/lang/exceptions/UnsupportedOperationException.h File Reference

```
#include <decaf/lang/Exception.h>
```

Data Structures

- class **decaf::lang::exceptions::UnsupportedOperationException**

Namespaces

7.601 src/main/decaf/internal/AprPool.h File Reference

```
#include <decaf/util/Config.h>
```

```
#include <apr_pools.h>
```

Data Structures

- class **decaf::internal::AprPool**

Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::internal**

7.602 src/main/decaf/internal/DecafRuntime.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/lang/Runtime.h>
#include <apr_pools.h>
```

Data Structures

- class **decaf::internal::DecafRuntime**
Handles APR initialization and termination.

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.
- namespace **decaf::internal**

7.603 src/main/decaf/internal/io/StandardErrorOutputStream.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/OutputStream.h>
```

Data Structures

- class **decaf::internal::io::StandardErrorOutputStream**
Wrapper Around the Standard error Output facility on the current platform.

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::internal**
- namespace **decaf::internal::io**

7.604 src/main/decaf/internal/io/StandardInputStream.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/InputStream.h>
```

Data Structures

- class **decaf::internal::io::StandardInputStream**

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

```
#include <decaf/util/Config.h>
#include <decaf/util/concurrent/Synchronizable.h>
#include <decaf/util/concurrent/Mutex.h>
```

Data Structures

- class **decaf::internal::util::concurrent::SynchronizableImpl**

A convenience class used by some Decaf classes to implement the Synchronizable interface when there is no issues related to multiple inheritance.

Namespaces

```
#include <vector>
```

Data Structures

- class **decaf::io::BlockingByteArrayInputStream**

This is a blocking version of a byte buffer stream.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::io**

7.665 src/main/decaf/io/BufferedInputStream.h File Reference

```
#include <decaf/util/Config.h>
```

```
#include <decaf/io/FilterInputStream.h>
```

```
#include <decaf/lang/exceptions/IllegalArgumentException.h>
```

Data Structures

- class **decaf::io::BufferedInputStream**

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::io**

7.666 src/main/decaf/io/BufferedOutputStream.h File Reference

#include <decaf/util/Config.h>
#include <decaf/lang/exceptions/NullPointerException.h>
#include <decaf/lang/exceptions/IndexOutOfBoundsException.h>
```

Data Structures

- class **decaf::io::OutputStream**

Base interface for any class that wants to represent an output stream of bytes.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::io**

7.683 src/main/decaf/io/OutputStreamWriter.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/Writer.h>
```

Data Structures

- class **decaf::io::OutputStreamWriter**

A class for turning a character stream into a byte stream.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::io**

7.684 src/main/decaf/io/PushbackInputStream.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/InputStream.h>
#include <decaf/io/FilterInputStream.h>
```

Data Structures

- class **decaf::io::PushbackInputStream**

*A **PushbackInputStream** (p. 3231) adds functionality to another input stream, namely the ability to "push back" or "unread" one byte.*

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

Defines

- #define **WAIT_INFINITE** 0xFFFFFFFF
The synchronized macro defines a mechanism for synchronizing a section of code.
- #define **synchronized(W)**

7.810.1 Define Documentation

7.810.1.1 #define synchronized(W)

Value:

```
if (false) {}
else
    for ( decaf::util::concurrent::Lock lock_W(W);
          lock_W.isLocked(); lock_W.unlock() )
```

7.810.1.2 #define WAIT_INFINITE 0xFFFFFFFF

The synchronized macro defines a mechanism for synchronizing a section of code.

The macro must be passed an object that implements the Synchronizable interface.

The macro works by creating a for loop that will loop exactly once, creating a Lock object that is scoped to the loop. Once the loop completes and exits the Lock object goes out of scope releasing the lock on object W. For added safety the if else is used because not all compilers restrict the lifetime of loop variables to the loop, they will however restrict them to the scope of the else.

The macro would be used as follows.

Synchronizable X;

```
somefunction() { synchronized(X) (p. 4713) { // Do something that needs synchronizing. } }
```

7.811 src/main/decaf/util/concurrent/ConcurrentMap.h File Reference

#include <decaf/lang/exceptions/NoSuchElementException.h>
#include <decaf/lang/exceptions/IllegalStateException.h>
#include <decaf/lang/exceptions/UnsupportedOperationException.h>
```

Data Structures

- class **decaf::util::Iterator**< **T** >

Defines an object that can be used to iterate over the elements of a collection.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**

7.840 src/main/decaf/util/List.h File Reference

```
#include <decaf/lang/exceptions/NoSuchElementException.h>
#include <decaf/lang/exceptions/IndexOutOfBoundsException.h>
#include <decaf/util/concurrent/Synchronizable.h>
#include <decaf/util/Config.h>
#include <decaf/util/Iterator.h>
#include <decaf/util/AbstractCollection.h>
#include <decaf/util/ListIterator.h>
```

Data Structures

- class **decaf::util::List**< **E** >

An ordered collection (also known as a sequence).

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**

7.841 src/main/decaf/util/ListIterator.h File Reference

- class **decaf::util::zip::Checksum**

*An interface used to represent **Checksum** (p. 1174) values in the Zip package.*

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**
- namespace **decaf::util::zip**

7.878 src/main/decaf/util/zip/CRC32.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/util/zip/Checksum.h>
```

Data Structures

- class **decaf::util::zip::CRC32**

Class that can be used to compute a CRC-32 checksum for a data stream.

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.
- namespace **decaf::util**
- namespace **decaf::util::zip**

7.879 src/main/decaf/util/zip/DataFormatException.h File Reference

```
#include <decaf/lang/Exception.h>
```

Data Structures

- class **decaf::util::zip::DataFormatException**

Namespaces

- namespace **decaf**
Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.
- namespace **decaf::util**
- namespace **decaf::util::zip**

7.880 src/main/decaf/util/zip/Deflater.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/lang/exceptions/NullPointerException.h>
#include <decaf/lang/exceptions/IllegalArgumentException.h>
#include <decaf/lang/exceptions/IllegalStateException.h>
#include <decaf/lang/exceptions/IndexOutOfBoundsException.h>
#include <vector>
```

Data Structures

- class **decaf::util::zip::Deflater**
This class compresses data using the DEFLATE algorithm (see specification).

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**
- namespace **decaf::util::zip**

7.881 src/main/decaf/util/zip/DeflaterOutputStream.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/FilterOutputStream.h>
#include <decaf/io/IOException.h>
#include <decaf/util/zip/Deflater.h>
#include <vector>
```

Data Structures

- class **decaf::util::zip::DeflaterOutputStream**

Provides a FilterOutputStream instance that compresses the data before writing it to the wrapped OutputStream.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**
- namespace **decaf::util::zip**

7.882 src/main/decaf/util/zip/Inflater.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/lang/exceptions/NullPointerException.h>
#include <decaf/lang/exceptions/IllegalArgumentException.h>
#include <decaf/lang/exceptions/IllegalStateException.h>
#include <decaf/lang/exceptions/IndexOutOfBoundsException.h>
```

```
#include <decaf/util/zip/DataFormatException.h>
#include <vector>
```

Data Structures

- class **decaf::util::zip::Inflater**

This class uncompresses data that was compressed using the DEFLATE algorithm (see specification).

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**
- namespace **decaf::util::zip**

7.883 src/main/decaf/util/zip/InflaterInputStream.h File Reference

```
#include <decaf/util/Config.h>
#include <decaf/io/FilterInputStream.h>
#include <decaf/io/IOException.h>
#include <decaf/util/zip/Inflater.h>
#include <vector>
```

Data Structures

- class **decaf::util::zip::InflaterInputStream**

A FilterInputStream that decompresses data read from the wrapped InputStream instance.

Namespaces

- namespace **decaf**

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

- namespace **decaf::util**
- namespace **decaf::util::zip**

7.884 src/main/decaf/util/zip/ZipException.h File Reference

```
#include <decaf/io/IOException.h>
```

Data Structures
